REASON FOR ALLOWANCE

- 1. Claims 1-47 is allowed.
- 2. The following is an examiner's statement of reason for allowance:

Abe et al., (U.S. Patent No. 6,552,702 B1) teaches an image display apparatus which has voltage sources in correspondence wit driving sources for emission substance of respective colors and performs color adjustments by controlling to output voltage or each voltage source to control the electron emitting amounts for driving the emission substance and a display control method in the apparatus. Sagano et al., (U.S. Patent no. 6,653,794 B2) teaches a display panel in MxN surface conduction electron emitting devices are connected in matrix by m row wirings and n column wirings and a modulation means connected to the column wirings and light emitting means disposed at position opposite to the cold cathode devices and the modulation means includes M bit voltage amplitude modulation means and pulse width limiting means for an image data of M bits and a modulation signal that is supplied to the surface conduction electron emitting devices is a voltage signal having an amplitude and a pulse width corresponding to image signal.

The prior art fails to teach or suggest an output circuit for storing an input signal to be inputted in time-series, generating a plurality of outputs consisting of a time series signal for generating a modulation signal based on the stored result and outputting to plurality of outputs to a plurality of outputs paths as parallel outputs and a modulation

side drive circuit for outputting parallel modulation signals based on the time series signal for generating a modulation signal,

Wherein the modulation side drive circuit for outputting parallel modulation signals based on the time series signal for generating a modulation signal, wherein the modulation side driver circuit is provided in a plural form corresponding to each of the plurality of output paths and each of the plurality of modulation side driver circuits supplies the modulation signal to a part of and a plurality of modulation wirings among the plurality of modulation wirings and wherein the output circuit starts to output at least one of the parallel outputs before storing the input signal for constituting the rearmost end among respective rear ends of the parallel outputs as claimed with combined limitation of claims 1,45,46.
